

ENDPOINT DATA LOSS PREVENTION

Discover, Monitor, and Protect Sensitive Data

Get real-time data protection against insider threats across Windows, macOS, and Linux endpoints. Unsecured file transfers, USB drives, and messaging apps can expose sensitive data to insider threats. Without the right controls, businesses face data breaches, financial loss, and compliance violations. A strong DLP solution ensures real-time protection *before* data leaves your network.

What's Included:

- **Real-Time File Transfer Control:** stops unauthorized transfers across email, cloud apps, & messaging platforms.
- **Multi-OS Endpoint Security:** secures Windows, macOS, and Linux devices.
- **USB + Peripheral Device Security:** blocks unapproved USBs and storage devices and enforces encryption.
- **Intellectual Property (IP) Protection:** uses advanced technologies to accurately discover IP addresses.
- **PII Protection:** discovers and protects Personally Identifiable Information (PII) stored on employee endpoints.
- **Insider Threat Protection:** stops data leakage & data theft by applying controls at the endpoint.
- **Compliance + Regulations:** achieve regulatory compliance with HIPAA, PCI-DSS, NIST, GDPR, SOX, and others.
- **Real-Time Monitoring:** continuous surveillance of data activities to identify suspicious behavior.
- **Threat Hunting:** involves actively searching for signs of malicious activity within your network.
- **Web Filtering:** blocks access to malicious websites and online content that can pose security risks.
- **DNS Protection:** safeguards your network by preventing access to malicious domains.
- **Application Whitelisting and Ring Fencing:** restricts the execution of unauthorized applications.
- **Privileged Access Management (PAM) and Elevation Solution:** manages and monitors privileged accounts, ensuring only authorized users have access.
- **Local Admin Accounts Management, including LAPs:** involves controlling and securing local administrator accounts to prevent unauthorized access.
- **Incident Response & Remediation Services:** provides expert support in the event of a DLP security incident.
- **Reporting + Analytics:** reports on data incidents and provides information for improving security measures.
